A practical guide for mastering the art of Investigative Research

Covering Education Requirements of a Modern-day "Online Investigative Techniques and Methods"

Online research has become an essential skill for everyone looking for quick actionable information. What typically took place in libraries, by phone calls or visits to experts in the field is being changed because of the Internet. Ironically, while the Internet Research work has been going on for many years, the "Profesional Internet Research" is considered a fairly new occupation that has yet to make its way into formal libraries of new job description today. Because of its newness, there was no structured curriculum for their education and training.

Our Online Investigative Research training book contains information including techniques and methods involved in modern day Internet research. The notes and topics covered should suffice the needs of PI's and other interested group that use online research for investigation and information verification needs. These notes cover email verifications, social media and websites information verifications, news , videos and images authentications and background checks on businesses and individuals.
